## CTR 750 GX

| Max. (mm) |     |           |
|-----------|-----|-----------|
|           |     |           |
| 750       | 620 | 530 x 530 |

4140 x 34-35 x 0,9-1,0 mm

|                                   |                           |
|-----------------------------------|---------------------------|
| Max. log diameter                 | 750 mm                    |
| Max. opening between blade guides | 620 mm                    |
| Max. elevation of blade           | 635 mm                    |
| Min. log height                   | 25 mm                     |
| Max. depth of cut                 | 255 mm                    |
| Max. log length (standard model)  | 3,45 m                    |
| Length track section              | 2,25 m                    |
| Min. log length                   | 0,75 m                    |
| Saw blade motor                   | 8,7 kW (11 HP)            |
| Sawblade                          | 4140 x 34-35 x 0,9-1,0 mm |
| Weight (standard model)           | 410 kg                    |
| Weight (track section)            | 68 kg                     |

## DESCRIPTION

**Feed into the cut and back - hand-operated**  
**Arm height adjustment - manual**  
**Control panel - on a mobile bridge**  
**Log handling - manual**

The bigger and stronger version of the popular CTR 550 allows for processing of logs up to 75 cm in diameter. Simple hand feed into the cut and back. Height is adjusted using a hand crank with adjustable scale.

In contrast to the standard version the sawmill is equipped with a professional Honda 8,7 kW (11 HP) petrol engine. Sufficient engine power allows trouble-free processing of logs of large diameters in all applications without the possibility of using an electric motor. Overall low weight allows easier transport of the machine. Due to higher weight and vibrations of petrol engine the construction of travelling bridge and sawmill arm is completely reinforced. It is designed primarily for cutting smaller volumes of lumber. Ideal solution for family farms or small sawmilling companies. Very simple hand feed into the cut and back. The control panel is placed on a mobile bridge of the sawmill arm. Thanks to that the operator has closer access to the workpiece when cutting.

The tensioning wheel system moves in a cast iron guide, which guarantees long service life and precision adjustment even with long-term use of the machine. The arm is fitted with aluminium running wheels with precise anti-vibration balancing. The circumference of the wheel has a recessed groove in which a replaceable rubber-textile V-belt is fitted, which forms the contact surface between the wheel and the saw blade.

The stability of the machine is based on very solid steel travel sections, which ensure optimum guidance of the sawmill arm bridge. The travel sections are fitted with tilting angle bars and log clamps/cam dogs.

The sawmill CTR 750 GX uses standard saw blades 34-35 x 0,9-1,0 mm as with the fully professional models.

The CTR model series represents the latest trends in sawmill design, with special emphasis on maximum accuracy and long service life at minimum cost. The machines are designed in an original modular way, which allows easy replacement or adjustment of all main technical nodes and their individual parts. This significantly reduces maintenance costs in the long-term use of the machine and also reduces service times, thus reducing production downtime.

All pictures shown are for illustration purpose only. Actual product may vary due to product enhancement.

## ACCESSORIES

### ACCESSORIES – SPECIAL ACCESSORIES

2,25 m

**Extending section  
2,25m**

#### **Extending section 2,25 m**

Include: 3x Cross beams, 1x Tilting angle bar, 1x Clamp  
Variable points: 1x Tilting angle bar, 1x Clamp

**Saw blade tension  
indicator**

#### **Saw blade tension indicator**

Ensures accurate tensioning of the saw blade to a required value according to the pressure gauge and its control during the use of the machine. Optimum tensioning of the saw blade is essential for its service life and cutting accuracy.

**Cant hook**

#### **Cant hook**

Serves as help with manipulation with logs on machine frame.

**Clamp with tilting  
angle bar**

#### **Clamp with tilting angle bar**

Additional clamping kit. It consists of the clamp and a tilting angle bar.

**Additional clamp**

#### **Additional clamp**

**Cam dog**

#### **Cam dog**

For fast and easy squared lumber clamping.

**Grease Gun**

#### **Grease Gun**

For regular maintenance of the machine according to the lubrication plan. Metal grease gun for 400g tubes. Equipped with a flexible pressure hose.

**Synthetic Grease LV  
2-3**

#### **Synthetic Grease LV 2-3**

400g tube for the grease gun.

### ACCESSORIES – CONSUMABLE PARTS

**Running Wheel V-  
belt SPB 1850**  
**Driven Wheel V-belt**  
**17x1560 Lw**

**Running wheel V-belt SPB 1850**  
**Driven Wheel V-belt B 17x1560 Lw**

**Blade Roller Kit VK**  
**750**

**Blade Roller Kit VK 750**  
Hardened roller, bearings, and shaft  
designed for a sawmill blade 35 mm.

- The original sawmill blades PILOUS MAXwood are available in a variety of types which enables you to process any kind of wood.
- The wide product range not only offers more affordable sawmill blades for low-volume cutting, but includes also sawmill blades for fully professional cutting and utmost performance.
- The foundation of all sawmill blades are top-quality German materials and precise workmanship. The quality of the sawmill blades is carefully monitored. All sawmill blades correspond to the strict ISO 9001 norm.
- We have added to our portfolio also an original Munkfors sawmill blade made by the world's leading manufacturer Uddeholm from Sweden.
- Pilous sawmill blades are used in dozens of countries around the world. Any wood you cut, the company Pilous will recommend you a sawmill blade that will fit your needs.

## BiMetal

Sawmill blade with tool steel teeth - completely eliminates the need to sharpen the sawmill blade as well as frequent blade replacement. Use: soft, hard to extremely hard wood.

## HSS

Bearing blade

## Stellite

Sawmill blade with teeth made of Stellite. Tooth setting is completely unnecessary. Use: soft, hard to extremely hard wood.

## Carbon spring steel

The most common sawmill blade for optimum price/performance ratio. Use: soft and hard wood.

Be careful when unpacking welded sawmill blades. They are in a shipping container in tensioned condition. Remove the sawmill blade cover only after fitting it onto the machine.
